SUMMARY

I am a self-taught Web Developer. I have been working in the HVAC/R industry since 2006. I have had a great career and have had a lot of interesting experiences through this field, but am looking to make a career change because I am passionate about web technologies. I believe my high level ability in problem solving learned in the HVAC/R field will translate nicely to solving problems in web development professionally.

TECHNOLOGIES

PROJECTS

OdinBook - https://blooming-shore-50178.herokuapp.com/
A knockoff of a basic Facebook. Built using Ruby on Rails. I generated a mailer to welcome a new user. I used Omniauth to allow signup via Facebook. I used AWS S3 via Active Storage to allow an attachment/update of an avatar photo. I styled the site using Bootstrap.

To Do - https://run-after.github.io/js-to-do/
A basic to-do app. Built using JavaScript using Webpack. Created using modules to keep code clean and maintainable.

Library – https://run-after.github.io/js-library/
A virtual library. Built with JavaScript, HTML/CSS. An app that allows you to add books to your virtual library. It is saved locally using LocalStorage.
